

PennHIP Report

Referring Veterinarian: Dr Mark Bramwell
Email: forms@southforkanimalclinic.com

Clinic Name: South Fork Animal Clinic
Clinic Address: 3852 E 300 N
Rigby, ID 83442

Phone:
Fax:

Patient Information

Client: Stewart, Russell
Patient Name: Sage
Reg. Name: High Points Mountain River Sage
PennHIP Num: 200322
Species: Canine
Date of Birth: 30 Nov 2021
Sex: Female
Date of Study: 19 Mar 2024
Date of Report: 24 Mar 2024

Tattoo Num:
Patient ID: 81761
Registration Num: SS31528703
Microchip Num: 985141004147136
Breed: WIREHAIRD POINTING GRIFFON
Age: 28 months
Weight: 67.4 lbs/30.6 kgs
Date Submitted: 22 Mar 2024

Findings

Distraction Index (DI): Left DI = 0.23, the right DI was not computed.

Osteoarthritis (OA): No radiographic evidence of OA for either hip.

Cavitation/Other Findings: No cavitation present. The right hip was either surgically treated and/or traumatically affected. This potentially distorts the measurement of the distraction index. Therefore, no laxity score is provided for the right hip.

Interpretation

Distraction Index (DI): One hip cannot be used for the laxity ranking (see Findings). The opposite hip will be used in the analysis. The value of the DI is 0.23.

OA Risk Category: The DI is less than or equal to 0.30. This patient is at minimal risk for hip OA.

Distraction Index Chart:

WIREHAIRD POINTING GRIFFON

BREED STATISTICS: This interpretation is based on a cross-section of 1244 canine patients of the WIREHAIRD POINTING GRIFFON breed in the AIS PennHIP database. The gray strip represents the central 90% range of DIs (0.22 - 0.63) for the breed. The breed average DI is 0.38 (solid square). The patient DI is the solid circle (0.23).

SUMMARY: The degree of laxity (DI = 0.23) falls within the central 90% range of DIs for the breed. This amount of hip laxity places hip at a minimal risk to develop hip OA. No radiographic evidence of OA for either hip.

INTERPRETATION AND RECOMMENDATIONS: No OA/Minimal Risk: Unlikely to show radiographic evidence of hip OA; even more unlikely to develop clinical signs of hip dysplasia. **Recommendations:** Normal to strenuous activity is permitted. Keep lean: try to maintain BCS at 5/9 for a longer and healthier life. **Breeding Recommendations:** Please Consult the PennHIP Manual.

COMMENTS:

Thank you for following policy and sending at least 2 Distraction views, as confirmation, when the hips appear tight (less than 0.30 DI).
